MD. MEHEDI HASAN

FLUTTER DEVELOPER · MOBILE ENGINEER (iOS & ANDROID)

mdmehedihasan4051@gmail.com | +880 1877-286284 | Dhaka, Bangladesh | Portfolio | LinkedIn | LeetCode

PROFESSIONAL SUMMARY

Flutter developer with ~5 years of experience building and shipping cross-platform apps for iOS and Android across enterprise ERP, recruitment, healthcare, and live sports. Built the internal ERP app for Bangladesh Television (BTV), where a new multi-stage approval workflow cut budget approval time from 3–5 days to 1–2 days. Shipped live vehicle-tracking apps for Grameenphone and Robi, plus WebRTC calling, WebSocket chat, and facial-recognition attendance.

PROFESSIONAL EXPERIENCE

Software Engineer, Flutter — Jun 2025 – Present

Nexdecade Technology Pvt. Ltd. • *Dhaka, Bangladesh*

- Built BTV ERP, a multi-role (Admin / Artist / Visitor) Flutter app for Bangladesh Television used by staff, visitors, and artists, covering gate passes, artist enlistment and grade upgrades, budgets, bills and vouchers, file management, and program scheduling, as **lead developer** of the team.
- Designed the pre/post-budget module (rate cards, travel allowances, live totals) with multi-stage approval workflows: pre-budget (Submit → PM → GM → Approved) and post-budget (Submit → PM → GM → Finance → Audit → Bill Generation → Payment), returnable at any stage before final approval, cutting approval turnaround from 3–5 days to 1–2 days.
- Built QR gate-pass verification, resumable TUS file uploads with permission-controlled sharing, and English/Bangla localization.
- Shipped three live vehicle-tracking apps on Google Play and the App Store, GP VTS (Grameenphone), Robi VTS, and Nex VTS, showing live fleet positions on Google Maps for all vehicles.
- Built a surveillance app that streams live WebRTC feeds from an unlimited number of cameras per client.
- Built a messaging app with real-time chat over WebSocket and 1:1 audio calls over WebRTC.
- Secured sensitive data with **AES-256** encryption and added FCM push notifications with deep links that open the exact record or approval.

Flutter Developer — Mar 2024 – Jun 2025

Neways International Company • *Shahbag, Dhaka, Bangladesh*

- Built cross-platform ERP modules for attendance, tasks, leave, and salary-advance requests, used daily by employees, integrating the Laravel REST backend, WebSocket chat, and push notifications via Firebase and Pusher.
- Built a facial-recognition check-in system that works only on authorized company Wi-Fi, verifies faces against the ERP backend in real time, and stores no biometric data on the device.

Junior Mobile Application Developer — Oct 2022 – Jan 2024

BDJOBS.COM • *Dhaka, Bangladesh*

- Owned the job-seeker selection flow in the Bdjobs Employer app, used by recruiters across one of Bangladesh's largest recruitment platforms: candidate filtering, sorting, shortlisting, and in-app video resume playback.
- Built features with Bloc and GetX, GetIt dependency injection, Dio networking, and Freezed code generation, keeping the codebase modular as the team grew.
- Added FCM push and local notifications so recruiters are alerted to new applicants instantly.

Flutter Application Developer — Mar 2022 – Sep 2022

Root Devs • *Dhaka, Bangladesh*

- Built Sccore and other live sports apps with match streaming (Better Player), live scores, premium chat, in-app purchases, and Google Sign-In.

Junior Mobile Application Developer (Intern Jun 2021 – Oct 2021) — Nov 2021 – Feb 2022

Skoder Technologies • *Dhaka, Bangladesh*

- Built two companion healthcare apps, Mediaid Pro (patients) and Mediaid (doctors), including in-app doctor–patient video consultations.
- As an intern, I designed app screens in Figma and built them as responsive Flutter layouts.

PUBLISHED APPS

Google Play: GP VTS • Robi VTS • Nex VTS • BTV E-services • Bdjobs Employer

TECHNICAL SKILLS

Flutter & Architecture: Dart, Clean Architecture, MVVM, DI (GetIt), Freezed, Custom Widgets, Responsive UI, Localization
State Management: Bloc, GetX, Provider, Riverpod
Networking & Real-time: Dio, REST APIs, WebSocket, WebRTC, Pusher, TUS resumable uploads
Firebase & Backend: FCM, Firebase Auth, Crashlytics, Realtime Database, Laravel API integration
Platform Features: Google Maps SDK, QR scanning, In-App Purchases, Google Sign-In, Syncfusion PDF, Encryption
Delivery & Tools: Play Store & App Store release; Git, GitHub, Figma

EDUCATION

B.Sc. in [Computer Science & Engineering] • BAUET, Natore — 2016 – 2020
